This is volume 2 of *Dentistry 3000*. This means the journal survived its first year and the inherited challenges to sustain its activities over time. The journal has received contributions from investigators based in several countries, and authors have enjoyed timely peer-reviews and publication without any publishing costs. Both volumes of the journal include topics of craniofacial development, craniofacial disorders, and endodontics.

We are in the process of indexing the journal in Medline and PubMed, and some authors have deposited their papers in PubMed Central, which allows for these papers to be found in the PubMed website search tools.

*Dentistry 3000* is a journal with the modern concept of open access to the world using a format that dates from the time libraries in universities would keep scientific journals. This philosophy allows for papers to be published based on their merit and not on what the potential interest a given article will generate among the readership that pays for membership fees.

We are looking forward to receiving your future contributions to *Dentistry 3000* in the many years to come.
